The "Funk-Mong" house is located along the west side of Maryland Route 66, about one mile north of Mt. Aetna in Washington County, Maryland. It is situated near a small spring and faces east.

The house is a five-bay, two-story brick structure with white trim. A four-bay kitchen wing, one story in height extends to the rear or west of the house. Observation of the interior of the building revealed that the el is a later addition. The walls at the facade of the house are laid in Flemish bond, while other walls display common bond brick work. The building is set on low limestone foundations. A water table of quarter round bricks extends along the facade.

The windows are not placed symmetrically in the facade. The openings of the three north bays are placed more closely together than the other openings in the front wall. First story windows contain twelve-over-twelve light sashes within frames trimmed with a narrow architrave. The second story windows contain nine-over-six pane sashes which appear to be joined with pegs. Many panes contain early, if not original glass. All windows are topped with flat brick arches.

The main entrance is located in the center bay of the facade. The opening has a semi-circular arched top and is lined with paneled jambs. Eleptical reeded pilasters flank the entrance way. The door enters into a large room. The main stair is located opposite the front door in a back hall, behind a double arched opening.

Other entrance ways include an opening to the cellar in the south foundation which is topped with a brick semi-circular arch. The rear addition contains randomly spaced doors and windows.

At the facade the eaves are finished with a fairly elaborate cornice consisting of a row of detils topped with modillions.

The roof is of corrugated sheet metal which was at one time painted black. Brick chimneys rise from inside each gable end. A third flue is located inside the west gable of the kitchen wing.

A one-story porch which is not original extends along the facade of the house. It is supported by round doric columns.

The house stands on a 619-acre tract of land. At present it is vacant and deteriorating although it is structurally sound. No substantiated date for construction has been found.

Other buildings present include a small three-bay, one-story structure of stucco over brick, located just south of the house. The building has a finished interior and may have been a dwelling. A stone spring house with an arched opening stands nearby. A large stone end barn is located west of the house.
